[How Air Brakes Work | HowStuffWorks](#)

II. General Description of Air Brake Systems and FMVSS No. 121 Requirements . The operation of an air brake system relies on compressed air stored in reservoirs (tanks) mounted on the vehicle (truck, bus, or trailer). By storing compressed air in the reservoirs, the air is readily available to make rapid application of the brakes possible.

[Sharing the Road - California DMV](#)

A truck or lorry is a motor vehicle designed to transport cargo. Trucks vary greatly in size, power, and configuration. Smaller varieties may be mechanically similar to some automobiles. Commercial trucks can be very large and powerful and may be configured to be mounted with specialized equipment, such as in the case of refuse trucks, fire trucks, concrete mixers, and suction excavators.

[1. LICENSING OF DRIVERS](#)

A disc brake is a type of brake that uses the calipers to squeeze pairs of pads against a disc or a "rotor" to create friction. This action slows the rotation of a shaft, such as a vehicle axle, either to reduce its rotational speed or to hold it stationary. The energy of motion is converted into waste heat which must be dispersed.. Hydraulically actuated disc brakes are the most commonly used ...
